Elevate your performance, efficiency and profits with  
*Matrix Technology™* diamond tools!

What's New?

## Matrix Technology™

Manufacturing diamond tools requires a process, where multiple functions have to precisely come together for the diamond tools to be effective and worthwhile. Bringing the technical aspects of the diamond tools together with the ergonomic requirements of the operator, procures an optimally performing diamond tool in a specific application. This whole process and resulting products are what K2 DIAMOND calls **Matrix Technology™**.

Within **Matrix Technology™** we have many types of products, different grades of products and different formulas for specific applications. For example; Products that carry the MX designation in the specification are K2's MAXXX specs, which utilize our diamond placement technology. The MX products are just a few of our complete **Matrix Technology™** product line. Other **Matrix Technology™** products utilize segmented designs, vacuum brazed designs, and many other types of engineering approaches to make up the whole **Matrix Technology™** family.

**K2 DIAMOND'S Matrix Technology™** Combines the science of our global innovations with the art of utilizing our technology to produce the optimal diamond tools for all applications.
